

Wet Oil Header Lines

Project Description: Replaced 3" and 5" wet oil gathering line (made of C-steel) in the Schönewörde oil field with a 4" fibreglass-reinforced line. Also laid parallel in the same pipe trench a 4" repository water line made of HDPE and a communication line

Scope of Work:

- Excavation and pipeline construction for laying the 4-inch fibreglass reinforced line and the 4" repository water line
- Removal of the 3" and 5" wet oil gathering line using environmentally gentle extraction process

Special Features: Crossing the Elbe canal with a protective pipe DN 500 using the HDD technique, approx. 230 m (750 ft.)
